

Dry Short Palm Fibre Catalog

Dry Short Palm Fibre is a biomass product from **Biofuel Resource**. Most of the dry short palm fibre is used as one of the biomass commodity such as *shredded EFB, palm kernel shell* for generating. However some of the dry short palm fibre could also used for other dedicate application which brings value to the product.

Short Dry Palm Fibre

The short dry palm fibre from Biofuel Resource is collected from the palm fibre sieving process. We are segregating **long palm fibre** and **short palm fibre** during our process. The long fibre will be bundle and export for mattress application. The *short palm fibre* will gather and send for *biomass application*.

Since the short palm fibre has gone through stringent *cleaning and drying process*, hence it could achieve better product quality for other application.
